

AI Project Snapshot

Purpose: Capture the basic facts about your AI project so the launch does not live only in your head, codebase, prompts, support inbox, or sales copy.

When To Use It

Use this worksheet when you are planning, prototyping, launching, selling, demoing, advertising, changing, or delivering an AI-enabled app, website, automation, consulting workflow, digital product, micro-SaaS, paid template, or client deliverable.

Use it again whenever the AI feature, model, vendor, data flow, public claims, human review process, or user-facing behavior changes.

What This Produces

You should finish with a one-page record of:

- what the project does
- where AI is involved
- who uses or relies on the output
- what data touches the AI workflow
- what claims users may see
- what risks or unknowns need review
- when the next review should happen

How To Fill It Out

Write short, plain answers. If you do not know something yet, write Unknown, Needs review, or Not applicable. The point is to make gaps visible, not to produce a perfect document.

Project Basics

Field	Answer
Project name	[PROJECT NAME]
Public offer name	[APP / SITE / SERVICE / PRODUCT / WORKFLOW NAME]
Owner	[YOUR NAME OR BUSINESS NAME]
Date	[DATE]
Next review date	[DATE]
Stage	☐ Idea ☐ Prototype ☐ Private beta ☐ Public launch ☐ Paid product ☐ Client work ☐ Paused
What the project does	[1-3 sentence description]
Who uses it	[Target users, customers, clients, or audience]
Who pays for it	[Users, clients, customers, sponsors, employer, no one yet, other]
Where people find it	[Website, app, marketplace, client workflow, email, social, private delivery, other]
Main customer promise	[The practical thing the user expects it to help with]

AI Use

Field	Answer
Where AI is used	[Feature, workflow, prompt, automation, chatbot, draft generator, classifier, summarizer, etc.]
AI model, vendor, or tool	[Vendor, model, API, plugin, no-code tool, platform, or local model]

What triggers the AI	[User action, scheduled automation, internal workflow, client intake, manual prompt, other]
Inputs used by AI	[Form fields, uploaded files, support messages, notes, public pages, database records, other]
Outputs produced	[Text, summary, answer, classification, code, image, recommendation, draft, other]
Human review points	[Where you, the user, or another person reviews, approves, edits, sends, publishes, or rejects output]
Where output appears	[Internal only, sent to client, shown to users, published online, added to product, other]
What the AI does not do	[Decide, send automatically, provide advice, replace human review, access certain data, other]

Data And Inputs

Field	Answer
User data involved	[Names, emails, uploaded files, form responses, account info, usage data, other]
Data pasted into prompts	[What you paste manually, if anything]
Files uploaded	[Types of files, if any]
Third-party data used	[Public pages, customer data, scraped data, licensed data, platform data, other]
Data you plan to avoid	[Sensitive data, client secrets, health info, financial info, minors' data, credentials, other]
Third-party vendors receiving data	[AI APIs, analytics, automation tools, hosting providers, support tools, other]
Where records are stored	[Docs, database, spreadsheet, CRM, support tool, local files, other]

Claims And User Understanding

Field	Answer
Public claims made	[What landing pages, demos, emails, ads, or sales calls say the AI can do]
Claims that need evidence	[Accuracy, speed, savings, revenue, reliability, safety, quality, other]
Claims to avoid or soften	[Overbroad, outcome-based, professional-advice, compliance, accuracy, automation claims]
What users are told about AI	[Disclosure, FAQ, onboarding note, product label, client note, none yet]
Important output limitations	[What users should not assume or rely on]
How users report problems	[Email, form, support widget, client call, none yet]

Main Risks Or Unknowns

List the biggest things you still need to check.

Risk or unknown	Why it matters	Next action	Owner	Due date
[Example: unclear vendor data-use setting]	[Could affect what user data can be sent]	[Review vendor docs/settings]	[Owner]	[Date]

Review Carefully If

- You are making accuracy, earnings, safety, professional-advice, automation, or business-outcome claims.
- The AI touches sensitive personal data, client confidential information, children or minors, credentials, payment data, or regulated subject matter.
- The AI affects real-world decisions about people.
- Users may rely on outputs without human review.
- You changed vendors, models, prompts, data sources, public copy, or support processes since the last review.

Short boundary: This worksheet is educational information, not legal advice. It helps you document your AI project and spot questions to review. Review specific legal, privacy, contractual, or regulatory obligations with qualified counsel or the appropriate advisor.
