

User Data and Privacy Intake

Purpose: Map what user, customer, client, buyer, or audience data touches your AI workflow before you launch or change it.

When To Use It

Use this when your AI project collects form responses, uploads, account data, support messages, client materials, analytics, chat logs, prompts, files, or other information from people or businesses.

Use it before adding a new AI vendor, prompt, automation, file upload, logging feature, analytics tool, support flow, customer-facing workflow, or client workflow.

What This Produces

You should finish with:

- a practical data map
- a list of data that should stay out of AI tools by default
- a vendor/tool data exposure record
- user notice and do-not-submit notes
- open questions for legal, privacy, security, client, platform, or vendor review

This worksheet does not decide legal conclusions. It helps you make data use visible before you launch.

Plain Data Rule

Use this as a starting rule and edit it for the project:

Do not put customer, client, buyer, employee, contractor, student, health, financial, legal, confidential, contract-restricted, credential, password, API key, or secret information into AI tools unless the specific tool and workflow have been reviewed for that type of data.

If the data came from someone else, assume it needs more care than your own notes.

Data Collected Directly From Users

Data type	Example	Required or optional?	Why collected?	Where stored?	Sent to AI?
Name					[Yes / No / Unsure]
Email					[Yes / No / Unsure]
Account or profile info					[Yes / No / Unsure]
Form responses					[Yes / No / Unsure]
Messages or prompts					[Yes / No / Unsure]
Uploaded files					[Yes / No / Unsure]
Payment or billing details					[Yes / No / Unsure]
Support messages					[Yes / No / Unsure]
Other					[Yes / No / Unsure]

Data Used In The AI Workflow

Question	Answer
----------	--------

What data is pasted into prompts?	
What data is uploaded as files?	
What data is sent through an API or automation?	
What data is generated by the AI?	
What AI output is shown to users, clients, or customers?	
What AI output is saved?	
What prompts, transcripts, or logs are retained?	
How long are logs, prompts, uploaded files, or outputs kept?	
Who can access prompts, files, logs, and outputs?	
Can users delete, correct, or request changes to stored information?	

Data That Should Stay Out By Default

Mark anything that may appear in prompts, files, logs, analytics, outputs, customer materials, or client materials.

- ☐ Customer names, emails, phone numbers, addresses, order history, support messages, or account details
- ☐ Client documents, strategy, contracts, files, transcripts, or business information
- ☐ Financial, tax, payment, insurance, banking, or investment information
- ☐ Health, medical, wellness, therapy, disability, or insurance information
- ☐ Legal facts, legal documents, claims, disputes, demand letters, or case information
- ☐ Student, child, school, or education records
- ☐ Employee, contractor, applicant, HR, performance, payroll, or disciplinary information
- ☐ Private messages, community posts, or personal stories people did not expect to be used in AI tools
- ☐ Confidential, NDA-covered, trade secret, or proprietary information
- ☐ Source code, credentials, passwords, API keys, tokens, or private repository details
- ☐ Government ID, identity verification, biometric, precise location, or similar sensitive data
- ☐ Anything a platform, client contract, privacy promise, or professional rule restricts
- ☐ None of these are expected

Safer Input Alternatives

Use these when AI help is useful but the raw data is not appropriate for the tool or workflow:

- replace names with placeholders
- summarize facts without personal details
- use fictional examples
- ask for structure, questions, checklists, or review prompts instead of giving private facts
- work from public information only
- use a reviewed business or enterprise AI account when sensitive data is truly needed
- get client approval before using AI on client data
- keep credentials, keys, payment details, and passwords out of prompts entirely

Third-Party AI Vendors And Tools

Vendor/tool	What data is sent?	Account type	Data-use/training setting to verify	Retention/logging note	Link to terms or settings	Last checked
		[Free / paid / business / API / local / other]				

Solo Builder AI Launch Kit v1 - Educational templates, not legal advice

		[Free / paid / business / API / local / other]				
--	--	--	--	--	--	--

Client Work Check

Use this section if AI helps with client, customer, or contract work.

Question	Answer
Does the client allow AI use on this work?	[Yes / No / Unknown / Not applicable]
Does the contract, NDA, platform rule, policy, or statement of work mention AI use?	[Yes / No / Unknown / Not applicable]
What client data would enter the AI tool?	
Is the AI tool allowed to use inputs for training or improvement?	[Yes / No / Unknown / Not applicable]
Did the client approve this workflow, if approval is needed?	[Yes / No / Not needed / Unknown]
What human review happens before delivery?	

If the answer is unknown and client data is involved, pause that workflow until the question is answered.

Analytics, Logs, And Monitoring

- ☐ Web analytics are used.
- ☐ Product analytics are used.
- ☐ AI prompt logs are stored.
- ☐ AI outputs are stored.
- ☐ Support conversations are stored.
- ☐ Error logs may include user data.
- ☐ Session recording or replay tools are used.
- ☐ No analytics or logs are currently used.

Notes:

[Write what is collected, where it is stored, and whether users are told.]

User Notice

Question	Answer
Are users told AI is involved?	[Yes / No / Not sure]
Where are they told?	
Are users told what data the AI processes?	[Yes / No / Not sure]
Are users told what not to submit?	[Yes / No / Not sure]
Is there a way to ask questions or report problems?	[Yes / No / Not sure]
Is there an opt-out or non-AI path?	[Yes / No / Not applicable / Not sure]
Does the privacy notice or customer-facing copy need review?	[Yes / No / Not sure]

Questions To Review

Question	Why it matters	Who should review?	Status / next step
		[Legal / privacy / security / client / platform / vendor / other]	
		[Legal / privacy / security / client / platform /	

		vendor / other]	
		[Legal / privacy / security / client / platform / vendor / other]	

Review Carefully If

- You send user data, client data, confidential files, sensitive categories, credentials, payment data, or information about children to a third-party AI vendor.
- Logs, analytics, support tools, session replay, or error reports may capture prompts, uploaded files, or outputs.
- Client contracts, platform rules, privacy promises, or professional duties may restrict AI use.
- Users are not clearly told what data should not be submitted.
- You are unsure whether users have been told AI is involved.

Short boundary: This worksheet is educational information, not legal advice. It helps you document data touching an AI workflow and spot questions to review. Review specific legal, privacy, contractual, security, platform, or regulatory obligations with qualified counsel or the appropriate advisor.
