

Filled Example: Consultant Or Freelancer Using AI

Purpose: Show how a solo service provider can document AI use in client-facing work without overcomplicating the process.

When To Use It

Use this example if you are a freelancer, consultant, strategist, designer, writer, marketer, automation builder, researcher, or productized-service seller using AI to support client work.

How To Read It

This is fictional. It shows a practical record for AI-assisted drafting and summarizing. It does not replace client contract review, privacy review, or professional obligations.

Example Project

Project: Northstar Studio Client Intake Workflow

Scenario: A solo brand strategist uses AI to summarize client intake forms, organize interview notes, and draft first-pass messaging outlines. The consultant reviews and edits everything before sending it to clients.

The workflow is internal drafting support. Clients see final edited deliverables, not raw AI output.

AI Project Snapshot Excerpt

Field	Example answer
Project name	Northstar Studio Client Intake Workflow
Public offer name	Brand messaging sprint
Owner	Northstar Studio
Date	2026-06-08
Stage	Client work
What the project does	Uses AI to summarize intake forms and create first-pass messaging outline drafts for brand strategy clients.
Who uses it	Internal use by the consultant. Clients see final edited deliverables, not raw AI output.
Who pays for it	Clients pay for brand strategy services. AI is part of the internal workflow.
Main customer promise	Better organized strategy drafts and faster first-pass messaging, with consultant review before delivery.
Where AI is used	Intake summary, theme extraction, first-pass outline drafting, alternate headline ideas.
AI model/vendor/tool	Hosted AI chat tool and document editor assistant. Vendor data settings need quarterly review.
Inputs used by AI	Intake responses, selected interview notes, business description, positioning drafts.
Outputs produced	Internal summaries, outline drafts, headline options, and consultant-edited client deliverables.
Human review points	Consultant checks AI summaries against source notes, edits deliverables, and removes unsupported claims before client delivery.
What the AI does not do	It does not make strategy decisions, provide legal review, or send raw output to clients.
User data involved	Client intake forms, business description, target customers, interview notes, draft positioning.
Public claims made	AI may support organization and drafting; client deliverables are reviewed by the consultant.
Main risks or unknowns	Client confidential information in AI tools; unsupported market claims in draft deliverables; client disclosure consistency.
Next review date	Monthly while workflow is used for active clients.

Data Intake Concerns

Concern	Example handling
---------	------------------

Client confidential information	Client intake form says not to include passwords, trade secrets, non-public financials, regulated personal data, sensitive employee/customer data, or confidential third-party data unless separately agreed.
Contract or NDA limits	Consultant checks client terms before using AI on client-provided material. Unknown terms mean pause AI use for that material.
Pasted notes	Consultant pastes only the information needed to summarize scope and messaging. Raw recordings are not uploaded.
Vendor settings	Consultant keeps a note of vendor data-use settings and reviews them before using a new tool.
Client records	Final deliverables and approved notes are stored in the client project folder. Raw AI outputs are deleted when no longer needed for drafting.

Client Disclosure Draft

I may use AI tools to help organize intake notes, summarize themes, draft outlines, and prepare first-pass messaging options. I review and edit AI-assisted work before sending deliverables to you.

Please do not include passwords, API keys, payment information, sensitive personal information, regulated information, trade secrets, or confidential third-party data in intake materials unless we have specifically agreed on how that information should be handled.

AI tools support the drafting process, but they do not replace my review, judgment, or your final approval of messaging.

Claims Review Excerpt

Original claim	Concern	Evidence or basis	Safer rewrite	Where updated	Publish decision	Date
AI-powered brand strategy in one day.	Could imply AI is producing strategy and speed is guaranteed.	Service still depends on consultant review and client inputs.	AI-assisted intake organization and first-pass messaging drafts for consultant-reviewed brand sprints.	Service page draft	Publish after edits	2026-06-08
Get expert market positioning instantly.	Overstates expertise and immediacy.	Consultant provides strategy; AI supports drafting.	Get a consultant-reviewed messaging draft built from your intake and interview notes.	Proposal template	Publish after edits	2026-06-08

Output Limitations

Possible issue	Review step
AI invents a customer pain point	Check against intake form and interview notes.
AI overstates a product benefit	Rewrite as a narrower claim or mark as needs evidence.
AI creates generic positioning	Edit based on client-specific details and strategy.
AI suggests legal, regulated, or industry-specific claim language	Remove from draft and flag for client review with qualified counsel or appropriate advisor if needed.
AI includes confidential details in a draft section	Remove detail, check source, and update data instructions.

Change Log Excerpt

Date	Change type	What changed	Why it changed	Risk impact	User-facing impact	Docs updated	Tested or checked by	Next review
2026-06-08	Launch baseline	Created AI-assisted intake summary workflow.	Speed up first-pass organization of client notes.	Same	Client disclosure added to proposal template.	Snapshot, data intake, disclosure	Owner	2026-07-08
2026-06-15	Prompt change	Added instruction to flag	Reduce overclaiming in	Lower	No direct client-facing change.	Change log, claims checklist	Owner	2026-07-08

		unsupported claims and professional-advice language.	draft messaging.					
--	--	--	------------------	--	--	--	--	--

Incident / Complaint Example

Date	Reporter/source	Issue type	What happened	User impact	Data involved	Immediate action	Change made	Follow-up needed	Status	Owner	Review date
2026-06-20	Internal review	Unsupported claim	AI suggested that the client's product cuts onboarding time in half without evidence.	No client impact; caught before delivery.	Intake summary and draft messaging notes.	Removed claim from draft.	Added prompt instruction to flag measurable claims needing evidence.	Check next two client drafts for similar claims.	Closed	Owner	2026-06-27

Pre-Launch / Client Delivery Decision

- ☒ Project basics documented.
- ☒ Client data rule drafted.
- ☒ Client disclosure added to proposal template.
- ☒ Claims review added to delivery checklist.
- ☒ Raw AI output is not sent directly to clients.
- ☐ Review vendor data-use settings before next new client.
- ☐ Add intake form warning about trade secrets and regulated data.

Final decision: Continue using the workflow for current client work after adding intake warning and reviewing vendor settings. Pause AI use for any client materials where contract, NDA, or data restrictions are unclear.

Review Carefully If

- A client asks you to process sensitive, regulated, employee, customer, or confidential third-party data.
- The AI is used for legal, medical, financial, employment, hiring, credit, housing, insurance, or other professional or high-stakes advice.
- Client contracts, platform terms, confidentiality promises, or data-processing rules limit what tools can process client material.
- Raw AI output is sent to clients without review.

Short boundary: This example is educational information, not legal advice. It shows one practical documentation style, not a legal conclusion about any specific client workflow.
